Description and Application

DW-55LSR and DW-A55LSR are rutile flux cored wires whose weld metals tolerate post weld heat treatment (PWHT) without an adverse degradation of mechanical properties.

DW-A55LSR produces a nominal 0.9%Ni weld metal which means that it fulfils NACE requirements for oil and gas production equipment in sourgas service.

These properties make for a varied range of usages in pipeline construction and offshore applications.

Recommended Parameter Range, for flat position

Note: The above parameter ranges are intended for Ar+CO₂. More voltage is necessary for 100% CO₂.
