Self Aligning Rotators
Capacity: From 10 to 300 Tonnes

Red Rock Self Aligning Rotators are robustly designed and built to withstand the harsh and rugged environments expected of such applications and permits rollers to align themselves to the work-piece without the need for manual pre-adjustment irrespective of ovality or irregularity. It uses replaceable polyurethane tyres mounted onto a cast steel drum for durability and superior traction.

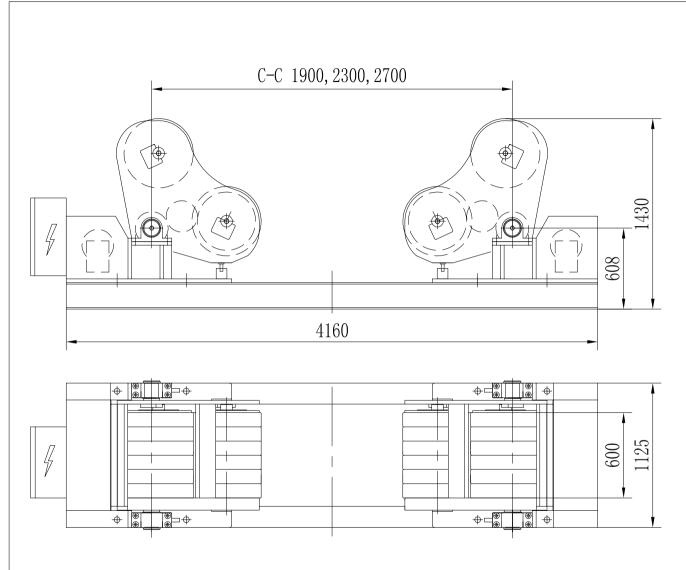

On the powered model both tyres are simultaneously driven by an AC gear motor fitted with inverter control box. A hand held low voltage control pendant on a 10-metre cable provides the operator with a full control of the rotator including a potentiometer for varying the speed, start/stop, forward/reverse and emergency stop.

Standard 3170mm base frame length can accommodate vessel diameters ranging from diameter 300mm to 6000mm. Grit blasting to SA 2.5 for all structural steel and polyurethane paintwork will ensure that your investment provides you with many years of uninterrupted use.

The idler roll has the same dimension to match the powered roll.
